

APC9-SD/APC45-SD - ADVANCED POLICE CARBINE

9 x 19 mm/.45 ACP

Based on the proven APC, the APC-SD is an extremely sophisticated design that will enable the operator, anywhere under any circumstances, to deploy a fully suppressed carbine or submachine gun while using standard 9 mm/.45 ACP ammunition! Silent superiority.

The APC-SD will minimize the "Murphy's Law Factor" in your operations. Murphy's Law (Anything that can go wrong will go wrong) is an old military rule that applies to all modern military and police operations worldwide in every country and under every situation. This is especially true when it comes to logistics.

The APC-SD has been ingeniously designed to accept normal supersonic 9 mm FMJ and Hollow Point ammunition (> 7.5 g / 115 grs) but will reduce the velocity of this bullet down to subsonic levels. This is not necessary with the APC45-SD as the .45 ACP is already subsonic.

Therefore having a stock of subsonic ammunition is unnecessary and the risk of „Murphy“ interfering in operations when stealth in covert operations is a requirement. This could be the shooting of street lights, guard dogs, car tires and other forms of target interdiction.

The two loudest sources of noise when firing a weapon are greatly reduced by the sophisticated design of the APC-SD. One is the sound of the bullet breaking the sound barrier. This is remedied by the holes which are ported on the base of the barrel near the chamber. As part of the propelling gases escaping through these holes into the suppressor, the bullet will not be accelerated to supersonic speed. The second are the hot propelling gases leaving the muzzle of the weapon. This is prevented by the state-of-the-art suppressor integrated on the APC-SD.

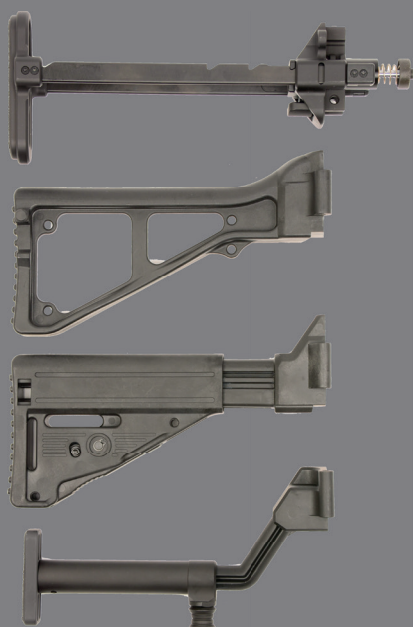

Both, the APC9-SD and the APC45-SD, are the perfect solution when a deliberated and proven sub-machinegun is needed for any kind of special operations.

The holes in the barrel, directly in front of the chamber of the APC9-SD, reduce the pressure of the propelling gases. So normal supersonic ammunition is slowed down to subsonic speed. No expensive subsonic ammunition needed.

The APC-SD comes with an Aimpoint TL, three magazines, a tactical sling, a fore grip, a cleaning kit, an instruction manual and a polymer carry case. Other B&T accessories are available.

The APC-SD can be equipped with different stocks in order to adapt the weapon to the specific needs of the user and the mission.

	APC9-SD SMG	APC45-SD
Caliber	9 x 19 mm	.45 ACP
Operation	All APC-SD are available as select fire sub-machine guns or as semi automatic only carbines.	
System	Closed bolt low recoil blowback system	Closed bolt low recoil blowback system
Magazines	Translucent polymer magazine, 15, 20, 25, 30 round sizes	Steel magazine, 12, 17, 25 round sizes
Barrel Length	148 mm	146 mm
Weight Empty*	3,3 kg	3,2 kg
Length min./max.	553 mm / 765 mm	556 mm / 768 mm
Sound Pressure Level	< 130 dB (A)	< 130 dB (A)
Primary Sighting System	Aimpoint® Micro TL red dot sight	Aimpoint® Micro TL red dot sight
Secondary Sighting System	Flip-up emergency sights, rear sight adjustable	Flip-up emergency sights, rear sight adjustable
Rate of Fire	1000 rpm	1000 rpm

B&T is certified as per
ISO 9001 quality and
ISO 14001 environmental
management standards
