

USW-320/M17 UPGRADE CHASSIS

The B&T USW320 Universal Service Weapon Upgrade Chassis converts the standard SIG Sauer P320 and the US Army M17 service pistol into the Universal Service Weapon configuration. This configuration will enable the operator to effectively and accurately engage targets out to 50 meters and beyond. Distances which were thought to be impossible with a standard handgun.

The trend-setting patented concept of the B&T USW is convincing. Carbine accuracy with a normal duty pistol enables any operator to more than double the effective range of his service pistol. B&T therefore decided to apply the USW concept to other pistols. Due to its modular design and its widespread use, the SIG Sauer P320 is a prime candidate to be upgraded to the USW concept. A slightly different chassis for the M17 is also available, other pistols to follow. The operator just removes the trigger group and inserts it into the USW-320 Upgrade Chassis. There are no other modifications to the weapon; the trigger group is held in place by the take-down lever. Furthermore the slide (full-size or compact) and the magazine holder are swapped to the new polymer lower. The whole transfer takes about two minutes.

The USW-320 Upgrade Chassis features an integrated standard Picatinny rail for a light/laser and the folding stock. It is still ambidextrous in handling, with the ambidextrous slide catch lever and reversible magazine catch. The folding stock folds onto the right side of the weapon, where the stock release is also located. The stock can easily and safely be operated with either the left or the right hand.

The USW-320 Upgrade Chassis accepts standard P320 magazines of 17 and 21 rounds and even any aftermarket 30-round size. The firearm's serial number is on the trigger group instead of the grip module and this is what is considered a firearm in most countries, not the Upgrade Chassis. This means that the USW-320 Upgrade Chassis is not firearm and thus is not serialized and can be sold and shipped with no restrictions in most countries.

USW-320 – DETAILED INFORMATION

The USW-320 Upgrade Chassis is a Swiss designed, engineered and produced polymer lower for the SIG Sauer P320 and M17 that, once converted, combines the size of a normal duty pistol but extends its range, accuracy and effectiveness to that of a 9 mm police carbine. It is ideal for general Police work but also for Airport Police, Railway Police, Customs Service, Harbor Security and Air Marshals. Anywhere, where the necessity of a shot at longer distances may occur.

The features of the USW-320 will enable the shooter to produce very tight shot groups at 25 meters / 27 yards and to place first round incapacitating hits at distances beyond 50 meters / 55 yards. This is possible even under the stress of a life-threatening confrontation. The purpose designed holster with various types of attachments (belt/thigh/MOLLE) will provide safe and reliable portage of the weapon during all missions and enable the operator to draw and fire the weapon as fast as any standard duty pistol. Unfolding the stock during the draw process adds just minimal time.

The USW-320 is the perfect upgrade for the P320 and the M17.

USW-320/M17 - Specifications	
Width:	43 mm (with folding stock closed)
Weight:	188 g (empty lower with folding stock)
Shoulder stock:	foldable, right side, 360 mm stock pull
NAR Rails:	1
Magazines:	any P320 magazine 17 rounds or bigger
Handling:	ambidextrous
Item number:	BT-430174 (USW-320 / black) BT-430191 (USW-320 / coyote tan) BT-430196 (USW-M17 / black) BT-430199 (USW-M17 / coyote tan)

B&T is certified as per
ISO 9001 quality and
ISO 14001 environmental
management standards.
