

# USW-G17 / -G20 UNIVERSAL SERVICE WEAPON GLOCK CHASSIS

Many law enforcement agencies worldwide carry the 9 x 19 mm Glock pistol as a sidearm. The USW Chassis gives any user a significant tactical advantage, as it allows the operator to use the weapon as a pistol while providing much better stability to extend the engagement distance out to 75 meters and beyond.

Glock pistol and Aimpoint  
ACRO sight not included

The Universal Service Weapon (USW) developed by B&T raised many eyebrows in the small arms trade. The ability to engage targets at much longer distances had a great appeal to professional users. The objection was however often raised, that the service already had the Glock as a service weapon. The solution was a chassis that would convert existing Glock models into the USW configuration.

The all machined aluminum chassis provides a rock solid structure to mount the pistol. The conversion takes about 2 minutes and all the parts are supplied. There are no permanent modifications to the weapon. All that has to be done is to replace the back slide plate so the charging handle can be mounted. This will enable the operator to quickly rack the slide.

## USW-G17 / G20

The design of the USW-G17 /-G20 is not just a new weapon but an entire new category of weapon, that fills the gap between Pistol, Submachine Gun and Police Carbine. The USW-G will enable any operator to engage targets effectively from 0 out to 75 meters (82 yards). This is thanks to the new concept that combines the latest Aimpoint ACRO P-1® Red Dot Sight, integrated side folding stock and the clever patented design. The ACRO red dot sight is used as the primary aiming system, while the original open sights remain as a backup. The folding stock is integrated into the aluminum chassis. The bridge of the receiver which mounts the Aimpoint is fixed, thus the Aimpoint does not move and stays stationary during the cycling process. The chassis also has a Picatinny/NAR (NATO Accessory Rail) to accept any type of light or laser on the market. The purpose designed holster will enable the operator to draw and fire the weapon in less than 1.0 seconds at a target without the stock extended. Unfolding the stock during the draw process adds less than 0.4 seconds.

Description:	USW- G17 / - G20
Delivery:	Foldable charging handle, slide cover plate with adapter for charging handel, instruction manual, sling loop, NAR/ Picatinny adapter
G17:	Fits all Gen 3 to 5 Glock Pistols with standard rail in cal. 9 x 19 mm, .40 S&W and .357 SIG without optical sights.
G20:	Fits all Gen 3 to 5 Glock Pistols with standard rail in cal. 10 mm and .45 without optical sights.
Length min./max.:	278 mm / 523 mm (G-17), 285 mm / 530 mm (G-20)
Width/Height:	61 mm / 72 mm
Weight:	ca. 420 g
Material:	Aerospace Aluminium (hard-coat anodized), Polymer
Color:	Flat Black
Sighting System:	Primary - Aimpoint ACRO P-1 (optional) / Secondary - Glock Original Sights
