B&T FIREARMS: SWISS MADE QUALITY, PRECISION AND INNOVATION.

Over the past 30 years, a small company on the shores of Lake Thun, known to only business insiders, has grown into a small force in the industry.

Despite growth and change, B&T has kept the most important thing with that it started more than thirty years ago. That is, passion for firearms and creating high-precision solutions for the most demanding customers. B&T AG, a Swiss company with an excellent reputation as a specialist producer of carbines, submachine guns, suppressors and weapon accessories. B&T stands for quality, precision and innovation worldwide.

APC PRO – THE PRACTICAL EVOLUTION OF THE APC SYSTEM

The Advanced Police Carbine – The APC family offers police and special units both semi-automatic and select fire rifles in all popular calibres.

The APC PRO offers excellent ergonomics, ambidextrous controls, a folding charging handles, an M4 type pistol grip, a folding and adjustable stock. This allows the user to adapt the gun to different situations and missions. This makes the APC the choice of professionals the world over.

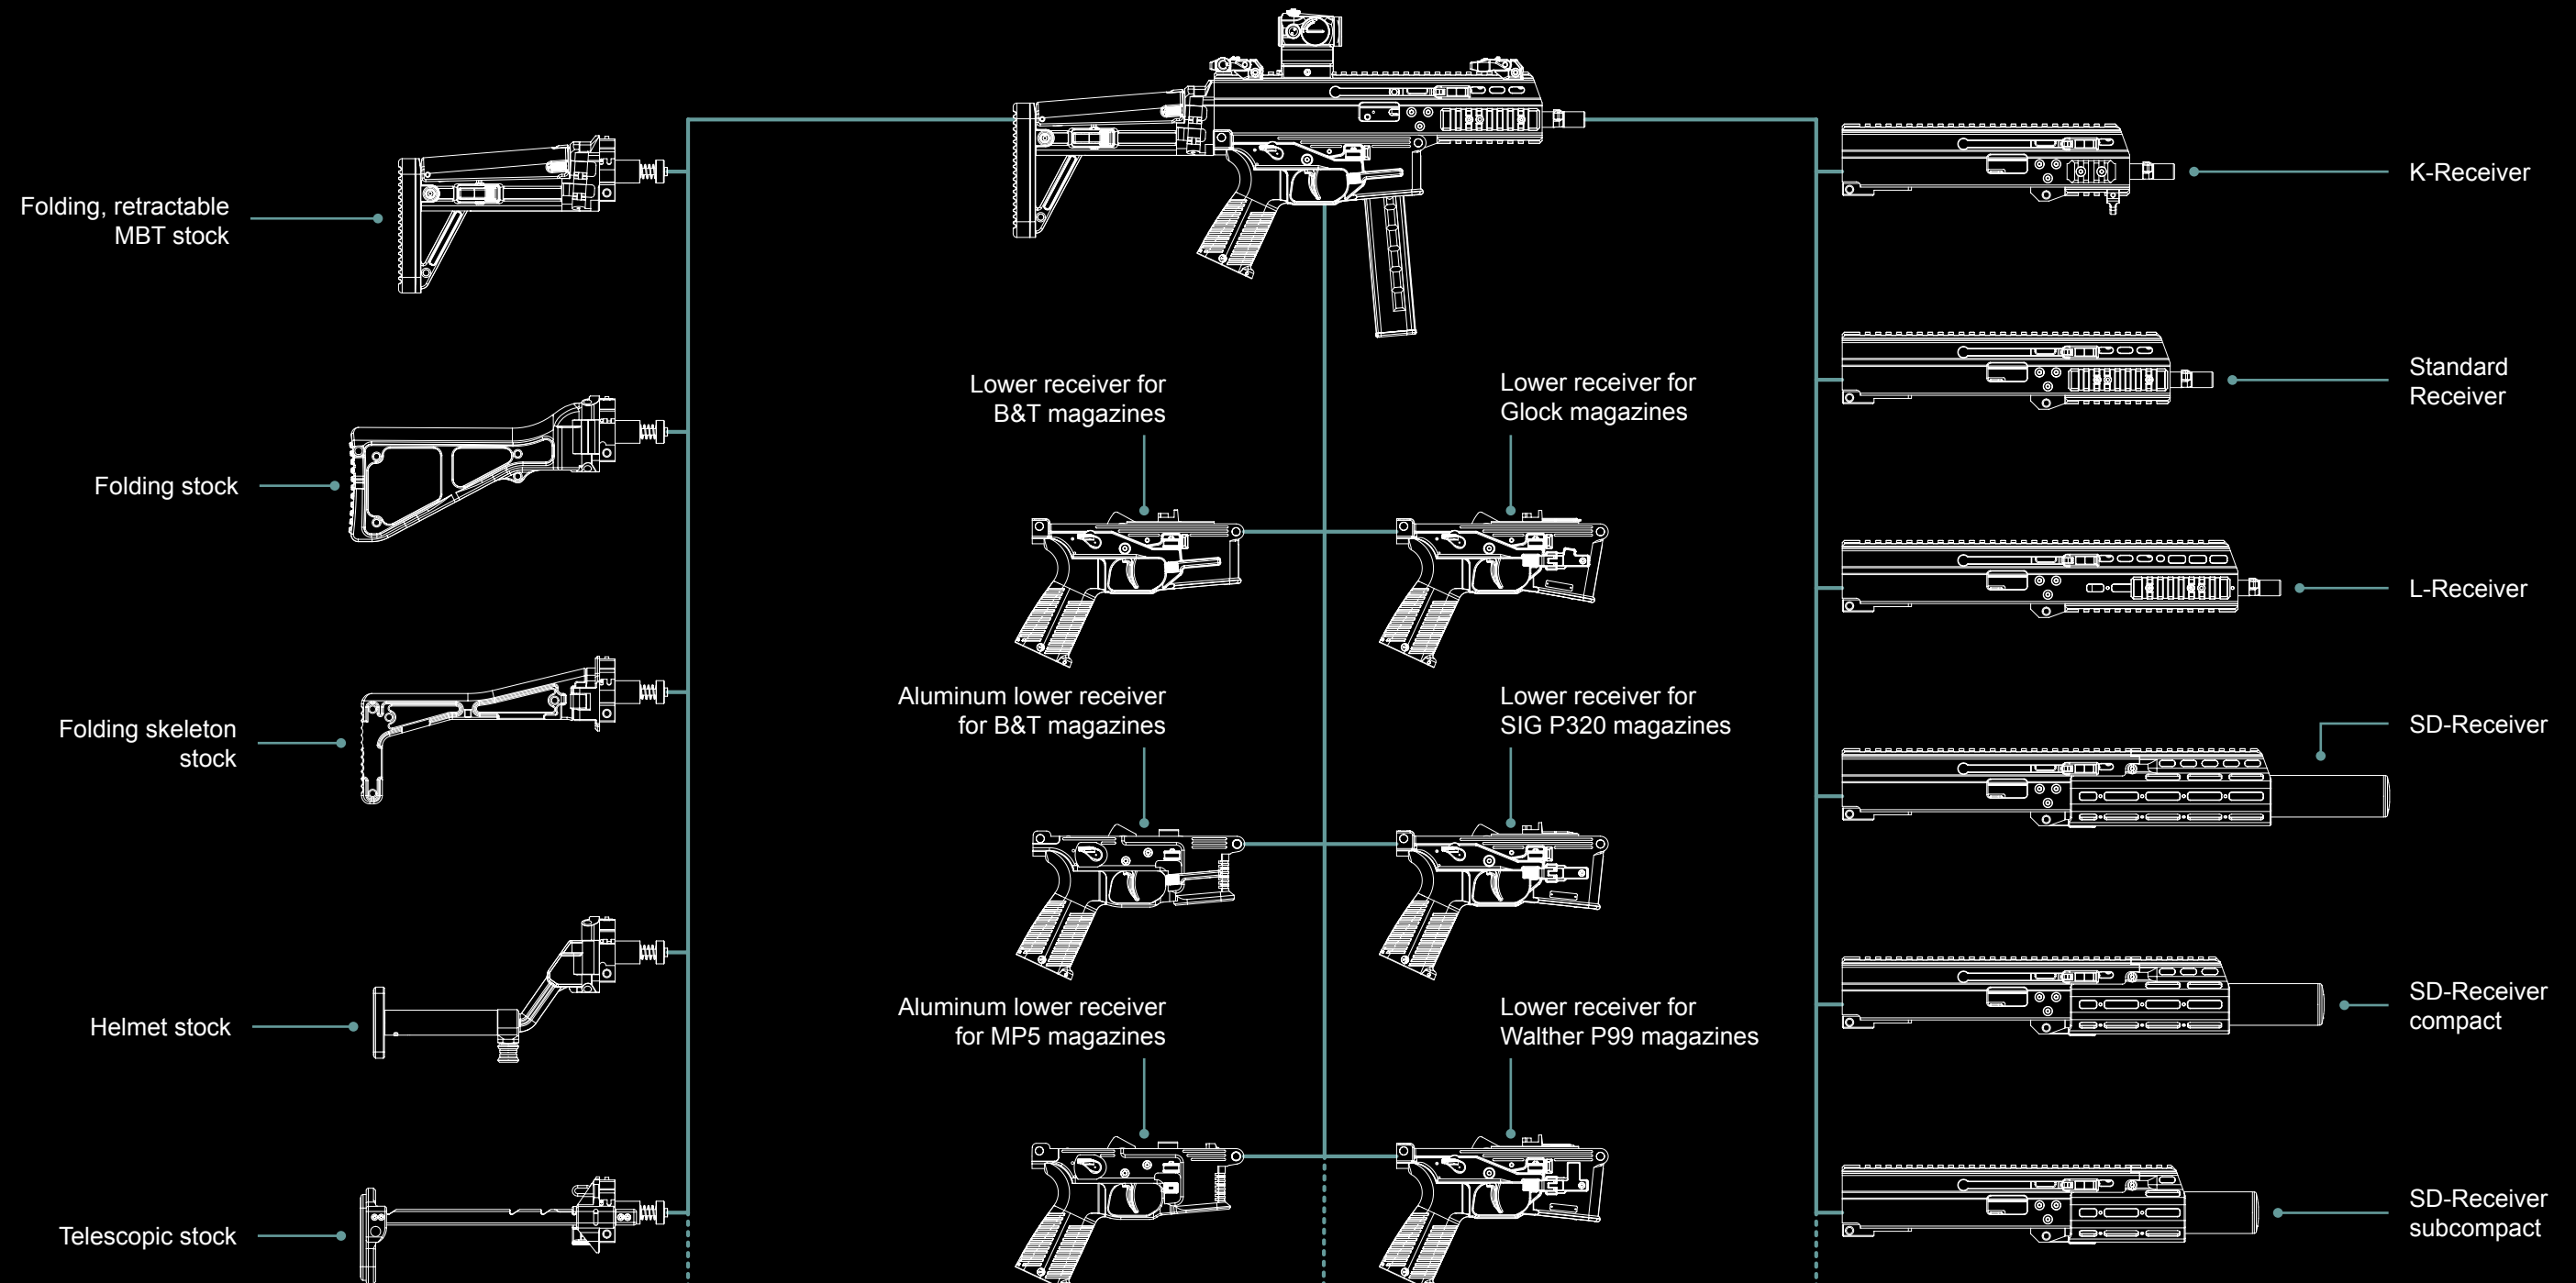

APC PRO MODULARITY

The APC, SPC and GHM have a modular design. This is done in order for the operator to fit the weapon to the application. For example, the K version for surveillance teams, undercover or close protection use. The long-barrelled version for sports shooting or the integrally suppressed SD version for special police or military applications. There is a version for every mission.

The weapon lowers can be exchanged between the different systems. This allows compatibility with different versions using B&T, Glock, SIG, Walther and HK magazines. This simple feature can greatly improve logistics for any service by having the same magazine for the carbine or SMG as the duty pistol.

Within each system, the barrel or receiver lengths and shoulder stock can be easily exchanged.* This results in a multitude of possibilities. The following pages illustrate a small selection of possible configurations and combinations.

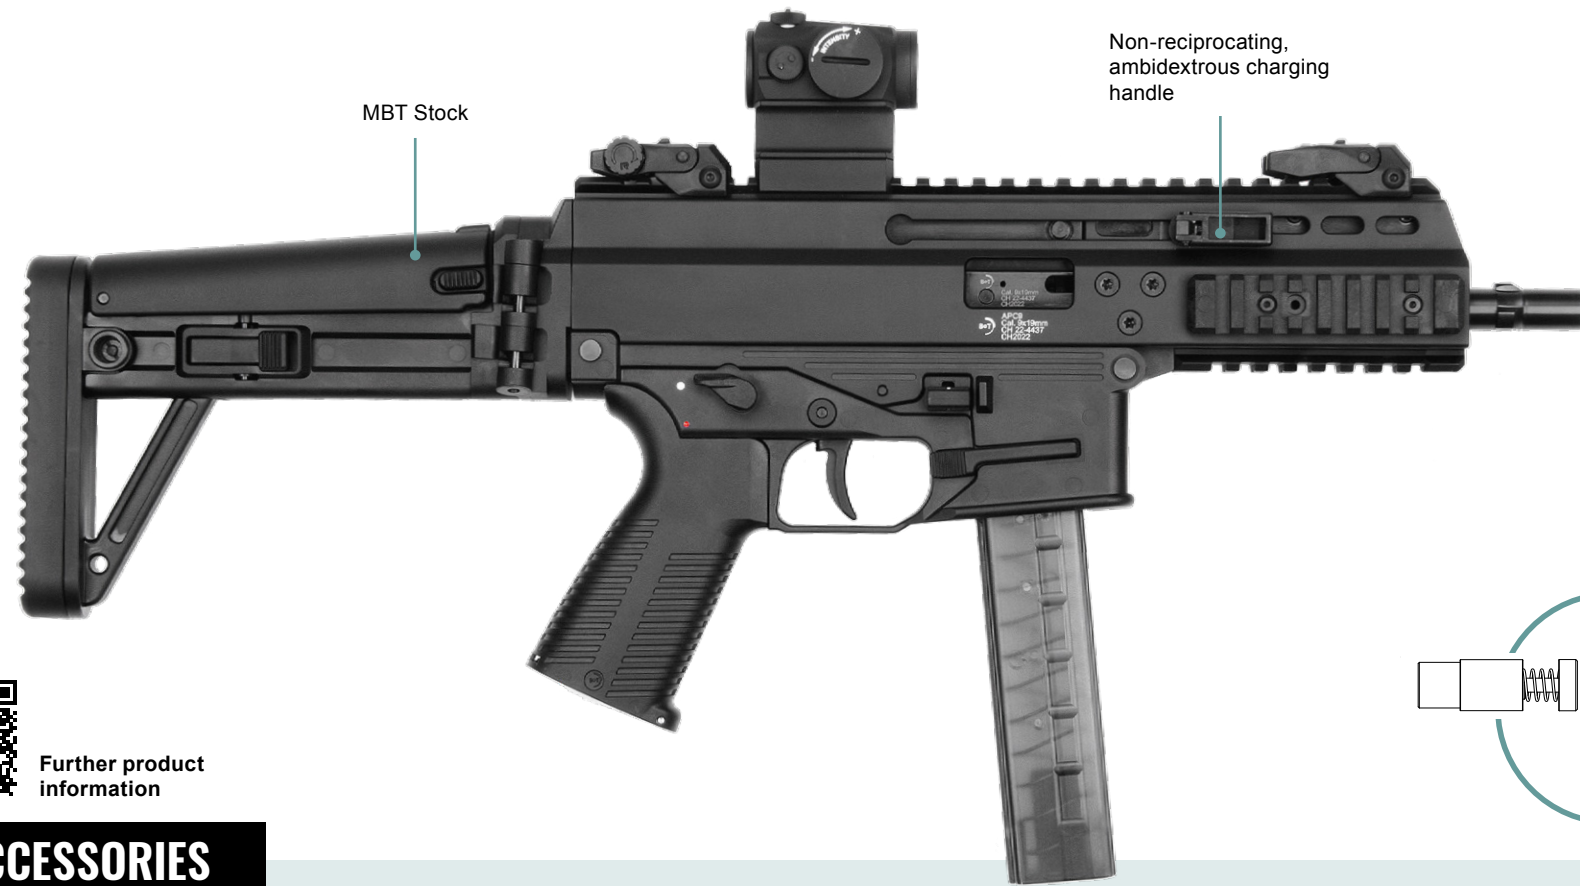

*Check your local laws

APC PRO

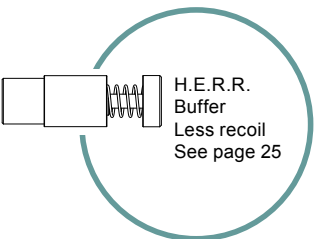

APC9/10/40/45

The APC9 PRO and its variants are a logical evolution in small arms design. The similar handling, manipulation and ergonomics will reduce training effort, range time and cost when transitioning from one caliber to another.

APC PRO

APC223/300

The APC223/300 PRO possesses the handling and manipulation the 9mm version. It is however, not just another AR platform but an original B&T design. For example, there is no buffer in the stock. This enables stock to be exchanged for different models depending on the mission. The magazines and handgrips however are standard AR type that are widely available.

SPC – THE FLEXIBLE AND CUSTOMIZABLE SEMI-AUTOMATIC CARBINE

The SPC Special Purpose Carbine combines many of the well-known B&T features such as the interchangeable lower and hydraulic buffer of the APC and modularity.

Thanks to this modular design the SPC lower can be exchanged with the lower of the APC and GHM systems. It has two different charging handles. The first charging handle is mounted forward of the weapon on either side of the upper receiver. The second charging handle is located at the rear where one would expect it on an AR15 type design. This allows the user the choice of using the AR15 or MP5 type of operation.

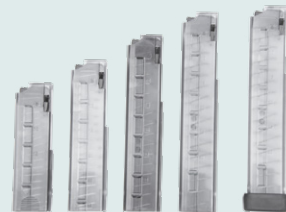

SPC SPC9

The new semi-automatic SPC9 is the latest 9mm Carbine from B&T. It incorporates all of the well appreciated features of the APC9 plus many handy and convenient attributes of other popular weapons systems.

GHM

GHM9

There is a small rodent located in the South-West United States called the grasshopper mouse. This carnivorous and ferocious little creature does not shy away from any other competitive species, including poisonous scorpions. This was the inspiration for the GHM9. Technically, the GHM9 is a compact and inexpensive pistol caliber carbine with many of the same features of the APC and SPC. In addition to the folding handle, interchangeable lower it also features the well-known and proven B&T hydraulic recoil buffer.

WE DON'T ONLY REDUCE SOUND...

Our ingenious **Hydraulically Enhanced Recoil Reduction-H.E.R.R.** – is an oil filled, hydraulic shock absorber that noticeably reduces recoil.

Depending on the firearm caliber and weapon design the impact of the bolt carrier in the receiver will produce much if not most of the felt recoil. Our H.E.R.R. system delays this recoil impulse hydraulically, thus turning a sharp blow into a gentle push. This significantly improves the precision of follow up shots. When using a select-fire weapon the group sizes will be noticeably tighter.

KH9 COVERT

The KH9 aka «Karl's Hobby» - arose from Karl Brügger's personal passion for shooting and desire to incorporate some unusual features into a PCC. These features include the double action trigger mechanism with de-cocking lever and the interchangeable magazine housing that allows the use of the four-row Suomi magazines.

SSP/SSP MICRO

The new SSP (Swiss Striker Pistol) is a conventional pistol version of the original Universal Service Weapon (USW). It incorporates many of the features one would expect from a well thought-out piece of Swiss Engineering. The all alloy construction comes ready to mount most types of optics and lights. The SSP Micro version is a compact version of the SSP with all of the same features and benefits minus the threaded barrel.

TP9-N/MP9-N

The MP9 submachine gun in 9mm calibre and its semi-automatic variant TP9 cover a wide range of tactical fields of applications. Due to its compact dimensions, low weight and high capacity magazine is ideal for close protection teams, intelligence services and police working in plain clothes as a PDW (Personal Defence Weapon).

STATION SIX

This unique design is based on the original VP9 which was inspired by the WW2 Welrod pistol used by the British SOE. It is a bolt-action pistol with an integrated silencer. This results what it probably the quietest 9mm and .45 ACP pistol in the world. B&T developed this pistol at the request of Swiss veterinarians, police authorities and hunters. They desired a handgun that is as quiet as possible to humanely dispatch cattle or injured game.

TECHNICAL SPECS

	STATION SIX
Length	303mm
Barrel length	77 mm
Weight	1.1 kg
